

WALL | INDUSTRIAL USE

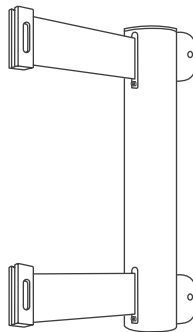

The **Wall Dual** model is the post that offer the most noticeable delimitation thanks to the double belt in every post. Each stanchion has two belts that work the same way: the belt extends and locks to the other post, creating the desired delimited areas. Its configuration also makes them combinable with a wall terminator of the same or a different type, and different guiding posts.

Conceived for an intense day-to-day use. Customizable belt with colours as well as logos and texts.
